

Observation Preprocessing

From GTS data to NWP input

Per Dahlgren
SMHI

Motivation

GTS data transmitted in TAC-format
(WMO defined ASCII code)

TAC gradually replaced by BUFR

Each institute should ask themselves:

GTS BUFR-data to NWP input, can we handle it

SMHI needed to work on it

Together with met.no in Norway.

Current Situation At SMHI

HIRLAM accepts only these specific templates

Some QC from pre-processor, CONFIDENCE, are used in data-assimilation

When migration is completed

1: Install updated ECMWF software

- *Relies on ECMWF IT-infrastructure: RDB-database etc.*
- *Difficult to implement in our experience*
- *Has become a black box after initial implementation*
- *Difficult to maintain*

2: Write a new one

- + *Will have good knowledge about the code*
- + *Easier to maintain, hopefully*
- *Quite a task to write!*

3: Rewrite HIRLAM to read GTS-BUFR

- *Still need to take care of duplicates etc*
- *HIRLAM is to be replaced, at some time*

SMHI: Add most important QC, encoded as CONFIDENCE values in the output BUFR

That's the deal between Norway and Sweden!

SMHI need generic handling of GTS-BUFR telegrams and TEMPS

Duplicates, corrections, merging etc.
