# Issues for System Aspects

- The Interoperability Programme
- Parallelization, load balancing, I/O
- Implementation of NWP/climate models on new hardware architectures
- Your homework, your input?
- This is not saying, that we have free resources to work on any additional issues / problems
- What we could offer, is something like $(ex)^2$ or even $(ex)^3$
- Which means: `exchange experiences` or even `exchange extraordinary experiences`
- Put up a list with topics of interest

# Which brings us to
# the last question:

# Who killed the Software Engineer?
