

EWGLAM final discussion

5th October 2017
Reading, United Kingdom

Special topic for 2018

One preliminary idea was proposed: “valuable scales in precipitation forecasts”. This could include topics mainly relevant to applications and verification, but also partly to model development (physics, dynamics). A final decision on the topic was not made at the meeting, consequently, Balazs Szintai asked participants to propose other topics if needed in one month after the meeting.

Structure of the meeting’s programme

It has been decided that the current structure of the meeting (Consortia presentations, Review talks, Poster session, Thematic sessions organized by Expert Team chairs, Parallel sessions, EWGLAM final discussion, SRNWP business meeting) will be kept.

Date and place of the next workshop

The next EWGLAM/SRNWP Meeting will be organized in Salzburg, Austria between 1 and 4 October 2018 on the kind invitation of ZAMG.
